

## ALZHEIMER'S AND DEMENTIA RESOURCES

Caring for individuals with Alzheimer's or other forms of dementia can be challenging. To support caregivers, a variety of community services and resources are available.

### 1. DIAGNOSIS

Obtaining an accurate diagnosis is essential to assess a person's level of functioning and to rule out other possible causes of memory loss or cognitive decline. The UC Davis Alzheimer's Disease Research Center specializes in diagnosing Alzheimer's and other types of dementia. You can also check with your healthcare provider for available diagnostic services.

### 2. ASSESSMENT & CARE MANAGEMENT

Some agencies offer care management services to assess an individual's level of functioning and to recommend appropriate services and resources for families. While private care managers typically charge a fee for these services, some nonprofit organizations may provide assessments at a reduced cost or free of charge. In addition, healthcare providers may include care management as part of ongoing medical care.
